

Campus ANPR System ERD

Reference-style arrangement with real one-to-many and one-to-one database relationships

Notation: 1 = one parent record; 0..N = zero or many child records; 0..1 = zero or one child record. PK = primary key, FK = foreign key, UK = unique key.

Line style: dark lines are the main flow; lighter lines are additional real FK connections from the schema. SETTINGS has no FK, so no fake connection is drawn.
